# Foreword

Working together, Forest Fire Management Victoria (FFMVic\*) and the Country Fire Authority (CFA) have developed this Joint Fuel Management Program which covers the Gippsland FFMVic Region and South East CFA Region. It demonstrates our commitment to working more closely together to deliver the best bushfire risk reduction outcomes for Victorians.

The Joint Fuel Management Program is planned to achieve an integrated and risk-focused fuel management program across public and private land. It is designed to implement long-term bushfire management strategies that outline how the risk of bushfires is managed for the protection of life and property on public and private land, while maintaining and improving natural ecosystems.

During the 2019/20 summer, we saw devastating bushfires across eastern Australia, which have had significant impacts on our communities and the environment.

In response, we have developed a Joint Fuel Management Program which implements our strategies to achieve or maintain residual risk at or below set targets but also seeks to support plans for managing landscape-scale bushfire propagation and the reduction of risk to ecosystems from these large fires. In some places, this may include identifying burns in recently burnt landscapes, with consideration given to the local context.

We also acknowledge the significant change during the past year with the establishment of Fire Rescue Victoria (FRV) on 1 July 2020. This occurred as part of the Fire Services Reform involving CFA and the Metropolitan Fire Brigade. The reform process will see the establishment of new FRV areas for Metropolitan Melbourne and key cities and larger towns across the State. The role that FRV will play in the planning and delivery of future JFMPs will be established as the reform process continues.

The Program has been shaped by a variety of research and local information, such as specialist input from FFMVic, CFA staff and volunteers and key industries, as well as knowledge from local communities, including Traditional Owners and key stakeholders. We would like to recognise the work that has been put into developing this Joint Fuel Management Program, by FFMVic, CFA and the local communities.

We encourage your continued input to ensure our plans protect those assets and values which are important to all Victorians.

# Joint Fuel Management Program

This Joint Fuel Management Program (JFMP) lists fuel management activities in the Gippsland Department of Environment Land Water and Planning (DELWP) Region and the South East CFA Region only.

It covers Latrobe, Macalister, Tambo and Snowy DELWP Districts and CFA Districts 11, 10, 9 and 27 (Map 1).

The schedules contained within this document set out where and when activities are planned to occur for the period from 2020/21 to 2022/23. The planned activities are listed by Lead Agency.

To view all fuel management works in your area, the statewide Joint Fuel Management Program map can be viewed at <http://www.ffm.vic.gov.au/jfmp>.

This document contains the following details:

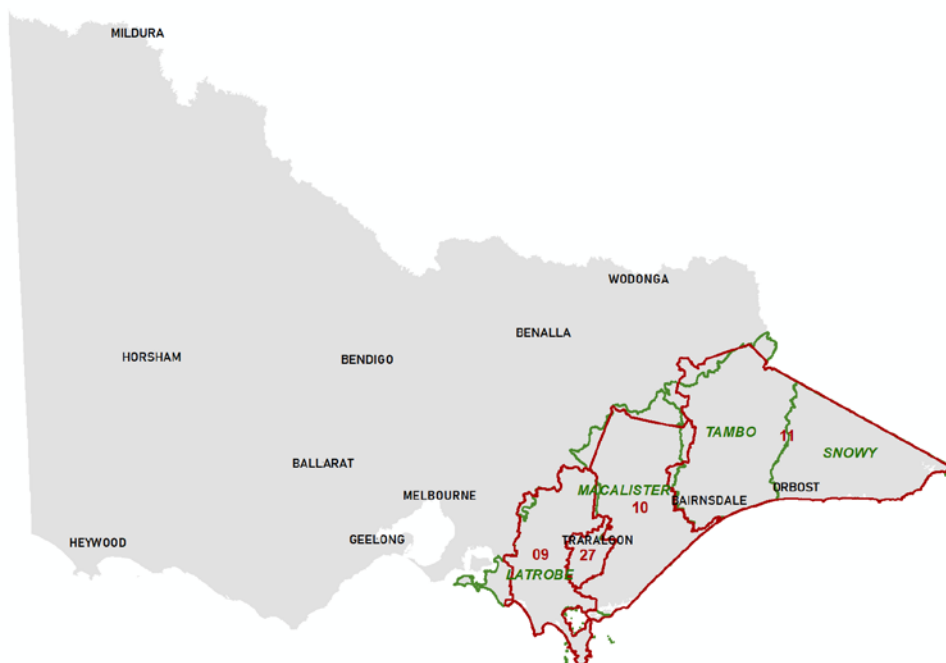

**Planned Burns** - fuel reduction, ecological, cultural and other planned burns by indicative year for the three-year period.

**Non-Burn Fuel Treatments** – a summary of the program of works that uses methods other than burning to achieve fuel management objectives.

**Cultural burning** – planned burns led by Traditional Owners on their Country using fire for a number of purposes.

It is important to note that the ability to carry out planned activities is dependent on seasonal and local weather conditions. To allow for this, planned burns from the second and third years of the program may be brought forward to the current year to replace a burn planned for the first year.

**Map 1: DELWP and CFA Districts included on this Joint Fuel Management Program**

The JFMP is prepared and will be implemented in accordance with *Safer Together: A new approach to reducing the risk of bushfire in Victoria*, the *Code of Practice for Bushfire Management on Public Land 2012* and relevant CFA and FFMVic Instructions, Manuals and Guidelines.

Burns on public land associated with logging regeneration as well as small heap burns are not included in the Joint Fuel Management Program as they are approved as part of separate planning processes.

# Our Objectives

This JFMP has been developed to implement strategies set out in the draft Gippsland Region Bushfire Management Strategy 2020 (BMS), which has been developed by FFMVic and CFA in consultation with agencies, stakeholders and the community.

The BMS will replace the Alpine and Greater Gippsland Strategic Bushfire Management Plan and part of the East Central SBMP, the Latrobe District part. Latrobe District was part of the East Central Bushfire Risk Landscape (old strategic planning footprint) but is part of Gippsland Region (new strategic planning footprint).

The BMS establishes a cross-tenure fuel management strategy to address the bushfire risk across public and private land. It sets clear objectives and associated performance measures for fire management at a regional scale. It identifies where important values and assets are located across the landscape, as well as regional trends including population, industry and environmental change. The BMS defines the configuration of fire management zones across the region that focus appropriate fire management activities to reduce bushfire risk for identified values and promote ecological resilience over the life of the strategy (30-40 years).

Importantly, the BMS identifies Bushfire Risk Engagement Areas (BREA) across public and private land. These areas are intended to support agencies to engage with private landholders about fuel management where it will provide effective bushfire risk reduction.

Gippsland's BMS includes a strategic approach to fuel management (Fire Management Zoning) which focusses on reducing bushfire fuels through planned burning and mechanical works on public land. The planning associated with this strategic approach is what informs the development of the JFMP.

The cross-agency planning process was overseen by Gippsland's Regional Strategic Fire Management Planning Committee (RSFMPC), who have given in principle endorsement of the BMS. The BMS is currently in draft form and final approval is imminent. Following approval by FFMVic CFO, the RSFMPC will be invited to reconvene and endorse the BMS, which is a supplement to the Gippsland Regional Strategic Fire Management Plan (2014).

## Residual Risk

The draft Gippsland Region Bushfire Management Strategy contributes to achieving the Victorian Government Statewide risk reduction objective, which commits to maintaining bushfire risk at or below a residual risk of 70% in the long-term.

Residual risk is the risk, on average, that bushfires will impact on life and property across the landscape. It is expressed as the percentage of the risk that remains after bushfire history and fuel management (mainly planned burning) activities are considered. It is reported on an annual basis.

Each District works towards managing the local bushfire risk through identifying planned burns and other fuel management works, which collectively will meet the Statewide risk reduction target.

This JFMP aims to meet or exceed the regional residual risk targets and to enable the delivery of bushfire management strategies other than residual risk. It is large enough to provide flexibility to account for different seasonal conditions. This may mean that not all planned burns and other works in Year 1 are carried out, which may mean that the projected residual risk is not achieved.

Gippsland's Residual Risk is currently 41%, well below the regional target of 71%, after bushfires affected large areas of the region during the past two summers. As a result, increasing fuel in these areas will put upward pressure on Residual Risk over the 2021-23 JFMP cycle.

If no planned burning were undertaken during this period, Residual Risk would increase by 7% by 2023. If the JFMP is implemented in full, Residual Risk is expected to remain at 41% in 2023. This indicates that even in the face of strong upward pressure, the location and scale of this planned burning program is sufficient to fully mitigate any increase in Residual Risk at a regional level.

Full implementation will maintain Residual Risk at current levels in Latrobe and Tambo districts and reduce residual risk in Macalister district. Although Residual Risk is expected to increase in Snowy district, this is from a very low level.

## Changes to Residual Risk through implementation of the JFMP

Residual risk categories	Latrobe	Macalister	Tambo	Snowy	Region
Residual Risk Target					71%
Current Residual Risk % (30 June 2020)	81%	47%	26%	3%	41%
Projected Residual Risk % by 2021 with implementation of JFMP	85%	41%	24%	3%	42%
Projected Residual Risk % by 2023 with implementation of JFMP	81%	43%	26%	6%	41%
Projected Residual Risk % by 2023 without implementation of JFMP	88%	60%	34%	8%	48%

# 2020/21 – 2022/23 Joint Fuel Management Program

## Planned burns

The following is a summary of the area and number of planned burns in all Districts over the next three years to achieve BMS objectives. These planned burns may have fuel reduction or ecological objectives and details for individual burns are included in Appendices 1 and 2. Any planned burns which have been added to the JFMP for the first time are indicated as being 'New' in the detailed description.

## Non-burning fuel treatments

Non-burning fuel treatment can include mulching, slashing or other operations which do not involve planned burning to reduce fuel loads. The work is an important contributor to reducing bushfire risk to communities as non-burning treatments may be more appropriate or practical in certain areas. For example, fuel on small areas located within or close to townships may be slashed or mulched, where burning is impractical. These methods may also be more suitable in certain vegetation types.

Some of these fuel treatments are annual, with others prioritised based on the seasonal conditions and scheduling of specific planned burns. The actual treatment area will be dependent on the condition of the fuels at the time of assessment.

**Summary of non-burning fuel treatment for 2020/21**

# Cultural Burning

Cultural fire is fire deliberately put into the landscape authorised and led by the Traditional Owners of that Country for a variety of purposes, including ceremony, protection of cultural and natural assets, fuel reduction, regeneration and management of food, fibre and medicines, flora regeneration, fauna habitat protection and healing Country's spirit.

We are guided by the *Victorian Traditional Owner Cultural Fire Strategy* which provides policy direction and a framework for fire and land management agencies to better enable Traditional Owners to undertake cultural burning for these cultural objectives.

There are six principles underpinning this strategy:

- cultural burning is right fire, right time, right way and for the right (cultural reasons), according to lore;
- burning is a cultural responsibility;
- cultural fire is living knowledge;
- monitoring, evaluation and research support cultural fire objectives and enable adaptive learning;
- Country is managed holistically; and
- cultural fire is healing.

The Strategy was authored by Victorian Traditional Owners with the support of a partnership between the Federation of Victorian Traditional Owner Corporations, DELWP, Parks Victoria and the CFA.

FFMVic and CFA recognises that cultural burning can assist landholders and communities in the use of fire to care for Country. The sharing of knowledge by our local Traditional Owners as well as from indigenous peoples from other parts of Australia will assist in improving our adaptive fire management practices in Victoria. This builds on supporting community through learning about how we live with fire.

Working together to foster knowledge sharing is an important way to enable participation of Aboriginal communities.

The cultural burns are nominated and will be led by Traditional Owners with support from Forest Fire Management Victoria and CFA.

Gippsland is working with Traditional Owner groups across the Region, guided by the direction they want to take and specific to their needs and wishes. We continue to build on the strong working relationships that are there and are open to establishing new ones. This year we look to build on the success of last year with burns identified as *Traditional Owner* listed below.

Traditional Owners	Burn name or location	Burn purpose
Snowy Cann Rivers First People's Country and Waters Aboriginal Corporation.	Noorinbee - Magazine Track	To meet cultural burning practice of low intensity burns to enhance cultural values as desired by traditional owners.
Snowy Cann Rivers First People's Country and Waters Aboriginal Corporation.	Bemm River - Binn Beach	To meet cultural burning practice of low intensity burns to enhance cultural values as desired by traditional owners.
Gunaikurnai Land and Waters Aboriginal Corporation	Forge Creek - Bairnsdale Flora Reserve	To meet cultural burning practice of low intensity burns to enhance cultural values as desired by traditional owners.
Gunaikurnai Land and Waters Aboriginal Corporation	Kalimna West - GLaWAC 1	To meet cultural burning practice of low intensity burns to enhance cultural values as desired by traditional owners.
Gunaikurnai Land and Waters Aboriginal Corporation	Kalimna West - GLaWAC 2	To meet cultural burning practice of low intensity burns to enhance cultural values as desired by traditional owners.
Gunaikurnai Land and Waters Aboriginal Corporation	Stratford - Knob Reserve Block 1	To meet cultural burning practice of low intensity burns to enhance cultural values as desired by traditional owners

## Endorsement

The 2020/21 – 2022/23 Joint Fuel Management Program has been endorsed by:

---

Deputy Chief Fire Officer, Gippsland DELWP Region:	Beth Roberts
Deputy Chief Officer, South East CFA Region:	Trevor Owen

---

## Approval

The 2020/21 – 2022/23 Joint Fuel Management Program has been approved by:

---

DELWP Chief Fire Officer:	Chris Hardman
CFA Chief Officer:	Garry Cook

---

Noting for on-ground ignition and delivery of cross tenure and private property burns, FFMVic and CFA agency responsibilities remain unchanged.

## How to become involved in the development of the Joint Fuel Management Program

FFMVic and CFA welcome comment on fire management all year round, on all parts of the planning process – both strategic and operational. Please be aware that due to the planning cycle your comments relating to certain aspects of the program may not be included until the following year's Joint Fuel Management Program.

Comments and suggestions relating to the JFMP can be sent to:

### *Planned Burns Victoria*

Planned Burns Victoria (PBV) is a new, easy-to-use, opt-in system that you can customise to suit your notification needs. PBV currently provides an overview of all FFMVic planned burns on this JFMP. The system also notifies people when a planned burn in Victoria is close to being ignited.

You can type in a postcode or location and access information about planned burns on public and/or private land that are close to being ignited. You can access the system at: <https://plannedburns.ffm.vic.gov.au>

## Appendix (1): FFMVic Schedules of Activities

These schedules contain the details of FFMVic-led planned burning activities. Please note that the planned burn year and season identified for each planned burn is indicative only and may be changed due to weather conditions and operational requirements.

The following abbreviations maybe used in the following Schedules: '\*' asterisk on burn name denotes a cross tenure burn; FRB – Fuel Reduction Burn; ECO - Ecological burn; TO – Traditional Owner; FMZ – Fire Management Zone; APZ - Asset Protection Zone; BMZ – Bushfire Moderation Zone; LMZ - Landscape Management Zone; PBEZ – Planned Burn Exclusion Zone; NZ -Not Zoned; FPA – Fire Protected Area.

BAW BAW SHIRE	GP-LTB-NJE-0003	Melbourne Water Tarago - PB03	3km N of Jindivick	FUEL REDUCTION			9.1	2022/2023

## Appendix (2): CFA Schedules of Activities

These schedules contain the details of CFA-led planned burning activities. Please note that the planned burn year and season identified for each planned burn is indicative only and may be changed due to weather conditions and operational requirements.

The following abbreviations may be used: "\*" asterisk on burn name denotes a cross-tenure burn; COM - Committee of Management; PP – Private Property; FRB – FRB Burn; ECO - ECO burn; TO – Traditional Owner.

### SCHEDULE 1: CFA LEAD DISTRICT 11 – PLANNED BURNING

#### CFA Lead District 11 Planned Burns 2020/21

Local Government Area	Burn Number	Burn Name	Burn Type	Land Management Objective	Planned Burn Size (ha)	New Burn
East Gippsland Shire	D11-19-008	Sarsfield - Great Alpine Rd 3	Fuel Reduction	To develop fuel reduced areas of sufficient width and continuity to reduce the speed and intensity of bushfires.	1	No
East Gippsland Shire	D11-20-001	Mount Taylor - Bullumwaal Rd 1	Fuel Reduction	To develop fuel reduced areas of sufficient width and continuity to reduce the speed and intensity of bushfires.	2.5	Yes
East Gippsland Shire	D11-20-002	Mount Taylor - Bullumwaal Rd 2	Fuel Reduction	To develop fuel reduced areas of sufficient width and continuity to reduce the speed and intensity of bushfires.	1	Yes
East Gippsland Shire	D11-19-007	Sarsfield - Great Alpine Rd 2	Fuel Reduction	To develop fuel reduced areas of sufficient width and continuity to reduce the speed and intensity of bushfires.	4	No
East Gippsland Shire	D11-20-003	Mount Taylor - Holes Rd 1	Fuel Reduction	To develop fuel reduced areas of sufficient width and continuity to reduce the speed and intensity of bushfires.	2	Yes
East Gippsland Shire	D11-19-015	Benambra-2751 Benambra-Corryong Rd	Fuel Reduction	To provide the highest level of localised protection to human life, property and community assets identified as highly valued including Benambra.	170	No
East Gippsland Shire	D11-20-024	Granite Rock - 70 Palmers Rd	Fuel Reduction	To provide the highest level of localised protection to human life, property and community assets identified as highly valued including the Sarsfield community.	20	Yes

Local Government Area	Burn Number	Burn Name	Burn Type	Land Management Objective	Planned Burn Size (ha)	New Burn
East Gippsland Shire	D11-20-004	Mount Taylor - Holes Rd 2	Fuel Reduction	To develop fuel reduced areas of sufficient width and continuity to reduce the speed and intensity of bushfires.	1.6	Yes
East Gippsland Shire	D11-19-016	Marlo - 193 Marlo-Cabbage Tree Rd	Fuel Reduction	To provide the highest level of localised protection to human life, property and community assets identified as highly valued including the surrounding Marlo community.	18	No
East Gippsland Shire	D11-19-020	Mt Taylor - 920 Bullumwaal Rd	Fuel Reduction	To provide the highest level of localised protection to human life, property and community assets identified as highly valued including the surrounding Mt Taylor community.	18	No
East Gippsland Shire	D11-20-011	Hillside - Princes Hwy 1	Fuel Reduction	To develop fuel reduced areas of sufficient width and continuity to reduce the speed and intensity of bushfires.	7.3	Yes

# Glossary

This glossary provides information on terms contained within the body of this document and the schedules.

**BREA** - Bushfire Risk Engagement Areas.

**Burn Type** – indicates the primary purpose of the burn including FRB burn (FRB), ECO burn (ECO).

**Burn Number and Name**– the unique identifier for each burn or planned fuel management activity.

**Cross-tenure burn** – a burn that covers both public and private land

**Fire Management Zone (FMZ)** – an area of public land in which fire is managed for specific asset, fuel and ECO objectives. Values included in this column can be APZ - Asset Protection Zone; BMZ – Bushfire Moderation Zone; LMZ - Landscape Management Zone, PBEZ – Planned Burn Exclusion Zone; or, NZ -Not Zoned.

**Forest Fire Management Victoria (FFMVic)** - is the organisation that delivers services to achieve DELWP's legislated responsibilities. It consists of specialist staff from DELWP, Parks Victoria, Melbourne Water and VicForests.

**Land Management Objective** - identifies the desired land management outcome(s) of the burn.

**Lead Agency** - The Lead Agency for a planned burn is determined by the burn's distance from public land. Within 1.5 km of public land, planned burning on non-public land falls within DELWP's legislative scope and DELWP can choose to be the Lead Agency. If it is outside 1.5 km of public land, DELWP is unable to undertake the planned burn; instead, the CFA will be the Lead Agency to undertake that burn.

**Local Government Area (LGA)** – the municipality in which most of the fuel management activity is located.

**Location** – a direction and distance of the planned burn from the nearest major township/locality.

**Planned Burns** - Planned burning is one of FFMVic and CFA's most important fire prevention activities. It involves the controlled application of fire during periods of lower fire risk, to achieve one of three main purposes: FRB (FRB), ECO (ECO) management and forest regeneration (REG).

It is important to understand that planned burning operations do not stop or eliminate the risk of bushfires. However, Victorian research, and similar information from other parts of Australia and overseas, clearly shows that firefighters have a much better chance of managing bushfires in areas where planned burns have been carried out.

Approved burns in this year's Plan will require a range of preparation works to make the planned area ready to ignite when the weather and other conditions are right. Preparation works may include, brushing up or grading of existing boundaries and internal tracks, management of hazardous trees, the construction and preparation of boundary and control lines with machinery and pest plant controls. The preparation works will have on-site inspections which will assess the surrounding assets and planned burn objectives.

**Private Property Burn** – burn that occurs wholly on private land.

**Planned Burn Size** – the maximum area of the fuel management activity measured in hectares (ha), including areas specifically excluded from disturbance.

**Residual Risk** - The impacts on life and property that remain after planned burning and bushfires, we call the 'residual risk'. If residual risk is 100 per cent – there has been no fire in the landscape and no fuel reduced and we are at maximum risk where fires will spread and impact. If residual risk is at 70 per cent – the impacts to life and property will be reduced by about a third.

**Strategic Fuelbreak:** A strategic fuelbreak is a strip of land where vegetation has been modified to reduce the amount of fuel available to burn during a bushfire.

**New Burn**– 'NEW' = New burn did not appear on last year's JFMP. *Blank box* = Not a new burn. Burn was approved in the previous JFMP but has not been carried out, it is included in this JFMP and may be conducted at any time.

**Non-Burning Fuel Treatments** – Non-burning fuel treatments such as the maintenance and construction of fire control lines, fuel breaks, and other fuel management activities are required to support the planned burning program. Treatments to achieve these works can include slashing, pruning, chemical application (in alignment with safety standards), grazing or other operations (such as ploughing, mulching or rolling) that may be more appropriate or practical in certain areas. For example, fuel on small areas or blocks located within townships may be treated mechanically, where burning is impractical. These methods may also be more suitable in certain vegetation types.
