

Fuel management is an important tool for reducing the impact of bushfires

Planned burning reduces the bushfire fuel in our forests and parks:

By reducing fuels, the intensity of bushfires is reduced when they occur, which makes it easier for forest fire fighters to bring fires under control.

By bringing fires under control quickly, Forest Fire Management Victoria can minimise the impact on:

People

Communities

The economy

Infrastructure

The environment

Forest Fire Management Victoria prioritises the protection of human life above all else.

Through careful delivery of planned burns, Forest Fire Management Victoria can improve the resilience of ecosystems and the services they provide.

Biodiversity

Water

Carbon storage

Forest products
