# Foreword

Working together, Forest Fire Management Victoria (FFMVic\*) and the Country Fire Authority (CFA) have developed this Joint Fuel Management Program (JFMP) which covers the Barwon South West FFMVic Region and South West CFA Region. It demonstrates our commitment to working more closely together to deliver the best bushfire risk reduction outcomes for Victorians.

The Joint Fuel Management Program is planned to achieve an integrated and risk-focused fuel management program across public and private land. It is designed to implement long-term bushfire management strategies that outline how the risk of bushfires is managed for the protection of life and property on public and private land, while maintaining and improving natural ecosystems.

In response to the devastating 2019/20 Black Summer bushfires and subsequent inquiries, the Victorian Government has committed to new programs which complement our current fuel management program and aim to reduce bushfire risk across all land tenure.

Investment will be made on fuel management, targeting long grass and other flammable undergrowth, particularly along our major road and rail corridors. We will work together with Local Government Authorities and water, road and rail authorities to ensure that our works are complementary.

We have worked with Traditional Owners in preparing the following program and we value their input into planned burns and other fuel treatment works. FFMVic and CFA continue to support Traditional Owners to return cultural fire to their Country.

The program has also been shaped by a variety of research and local information, such as specialist input from FFMVic, CFA staff and volunteers and key industries, as well as knowledge from local communities, including Traditional Owners and key stakeholders. We would like to recognise the work that has been put into developing this Joint Fuel Management Program, by FFMVic, CFA and the local communities.

We encourage your continued input to ensure our plans protect those assets and values which are important to all Victorians

\* Forest Fire Management Victoria (FFMVic) – is the organisation that delivers services to achieve DELWP's legislated responsibilities. It consists of specialist staff from DELWP, Parks Victoria, Melbourne Water and VicForests.

## About the program

The JFMP encompasses fuel management activities planned to be delivered by CFA and FFMVic across the coming three years in the Barwon South West FFMVic Region and South West CFA Region (Map 1)

Each activity is led by either CFA or FFMVic but is delivered with the support of both agencies and other partners including Department of Transport, EMV, Traditional Owners and local businesses.

This document contains details about the following planned activities:

**Planned Burns** - fuel reduction, ecological and other planned burns by indicative year for the three-year period.

**Non-Burning Fuel Treatments** - the program of works that uses methods other than burning to achieve fuel management objectives.

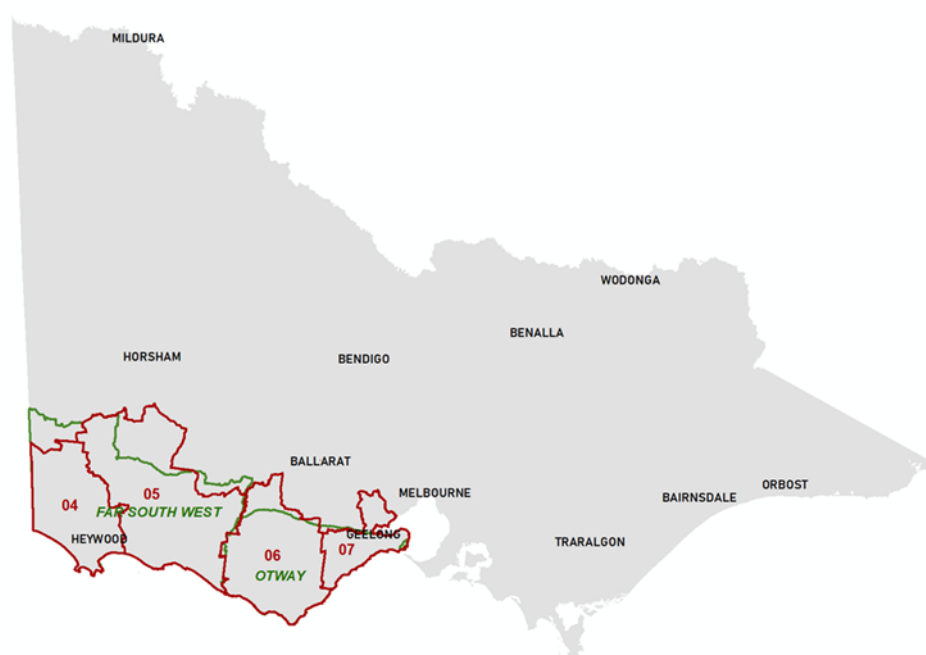

**Strategic Fuel Breaks** - a strip of land where vegetation has been modified to reduce the rate of spread and intensity of fire for the direct protection of assets and/or assist fire control. They can also assist in the safe delivery of planned burns.

**Cultural burning** – planned burns led by Traditional Owners on their Country and the use of cultural fire as a land management practice by Traditional Owners.

It is important to note that the ability to carry out planned activities is dependent on seasonal and local weather conditions. To allow for this, planned burns from the second and third years of the program may be brought forward to the current year to replace a burn planned for the first year.

### Map 1: FFMVic and CFA Districts included on this Joint Fuel Management Program

Note: CFA Districts 15/16/17 and DELWP Districts Wimmera and Midlands have a small overlap in to the Barwon South West Region, fuel treatments in these CFA/DELWP Districts are captured in the Grampians Region or Midlands Region JFMP.

The JFMP is prepared and will be implemented in accordance with *Safer Together: A new approach to reducing the risk of bushfire in Victoria*, the *Code of Practice for Bushfire Management on Public Land 2012*

the Barwon South West Regional Bushfire Management Strategy and relevant CFA and FFMVic Instructions, Manuals and Guidelines.

Burns on public land associated with logging regeneration as well as small heap burns are not included in the JFMP and are approved through a separate planning process.

# Our Objectives

This JFMP has been developed to implement strategies set out in the Barwon South West Bushfire Management Strategy (BMS), which has been developed by FFMVic and CFA in consultation with agencies, stakeholders and the community.

The BMS establishes a cross-tenure fuel management strategy to address the bushfire risk across public and private land and

- sets clear objectives and associated performance measures for fire management at a regional scale;
- identifies where important values and assets are located across the landscape; and
- includes regional trends in population, industry, and environmental change.

The BMS defines

- fire management zones on public land that focus appropriate fire management activities to reduce bushfire risk for identified values and promote ecological resilience over the life of the strategy (30-40 years).
- Bushfire Risk Engagement Areas (BREA) across public and private land. These areas are intended to support agencies to engage with private landholders about fuel management where it will provide effective bushfire risk reduction.

**You can explore your local Bushfire Management Strategy [here](#).**

## Residual Risk

The Barwon South West BMS contributes to achieving the Victorian Government statewide risk reduction objective of maintaining bushfire risk at or below a residual risk of 70% in the long-term.

Residual risk is the risk, on average, that bushfires will impact on life and property across the landscape. It is expressed as the percentage of the risk that remains after bushfire history and fuel management (mainly planned burning) activities are considered. It is reported on an annual basis.

Each Region works towards managing local bushfire risk by identifying planned burns and other fuel management works, which collectively will meet the statewide risk reduction target.

This JFMP aims to meet or exceed district and regional residual risk targets that contribute to the statewide target and to enable the delivery of bushfire management objectives as documented in the BMS. It provides flexibility to account for different seasonal conditions.

**Table 1: Changes to Residual Risk through implementation of the JFMP**

Residual risk categories	Far South West	Otway	Barwon South West
Residual Risk Target	55	60	60
Current Residual Risk % (30 June 2022)	50	58	58

## Strategic Fuel Breaks

Strategic Fuel Breaks can be one of two types:

**Landscape protection breaks (LPB):** Located in the forest to divide the landscape into units/areas suitable to help to reduce the fire to the smallest size possible. These breaks provide a platform for fighting fires in the forest and may also reduce fire impacts on nearby communities.

**Asset protection breaks (APB):** Designed to provide direct protections of communities and assets from the direct impacts of fire. These breaks are generally located adjacent to townships and assets.

The following strategic fuel breaks are proposed for construction (new) or renewal (upgrading of an existing break to meet current standards) during 2022/23.

# Cultural Burning

Cultural fire is fire deliberately put into the landscape lead by the Traditional Owners of that Country for a variety of purposes, including ceremony, protection of cultural and natural assets, fuel reduction, regeneration and management of food, fibre and medicines, flora regeneration, fauna habitat protection and healing Country's spirit.

We are guided by the Victorian Traditional Owner Cultural Fire Strategy which provides policy direction and a framework for fire and land management agencies to better enable Traditional Owners to undertake cultural burning for these cultural objectives.

There are six principles underpinning this strategy:

- cultural burning is right fire, right time, right way and for the right (cultural reasons), according to lore;
- burning is a cultural responsibility;
- cultural fire is living knowledge;
- monitoring, evaluation and research support cultural fire objectives and enable adaptive learning;
- Country is managed holistically; and
- cultural fire is healing.

FFMVic and CFA recognises that cultural burning can assist landholders and communities in the use of fire to care for Country. The sharing of knowledge by our local Traditional Owners as well as from indigenous peoples from other parts of Australia will assist in improving our adaptive fire management practices in Victoria. This builds on supporting community through learning about how we live with fire.

Working together to foster knowledge sharing is an important way to enable participation of Aboriginal communities.

The following is the number of cultural burns nominated and will be led by Traditional Owners with support from Forest Fire Management Victoria and CFA:

Traditional Owners	2022/2023	2023/2024	2024/2025

## How to get involved

FFMVic and CFA welcome comment on strategic and operational fire management all year round. Please be aware that due to the planning cycle your comments relating to certain aspects of the program may not be included until the following year's JFMP.

Comments and suggestions relating to the JFMP can be sent to:

Aaron van Winden  
Regional Fuel Management Coordinator  
Department of Environment, Land, Water &  
Planning

**You can find out more about our fuel management programs and subscribe to notifications at [plannedburns.ffm.vic.gov.au](https://plannedburns.ffm.vic.gov.au)**

Planned Burns Victoria (PBV) is an easy-to-use, opt-in system that you can customise to suit your notification needs. PBV provides an overview of all planned burns on this JFMP and allows individuals to sign up to receive notification of when a burn is scheduled and ignited.

# Glossary

This glossary provides information on terms contained within the body of this document and the schedules.

**BREA** - Bushfire Risk Engagement Areas.

**Burn Type** – indicates the primary purpose of the burn.

**Burn Number and Name**– the unique identifier for each burn or planned fuel management activity.

**Cross-tenure burn** – a burn that covers both public and private land

**Fire Management Zone (FMZ)** – an area of public land in which fire is managed for specific asset, fuel and ECO objectives. Values included in this column can be APZ - Asset Protection Zone; BMZ – Bushfire Moderation Zone; LMZ - Landscape Management Zone, PBEZ – Planned Burn Exclusion Zone; or, NZ - Not Zoned.

**Forest Fire Management Victoria (FFMVic)** – FFMVic consists of specialist staff from DELWP, Parks Victoria, Melbourne Water and VicForests.

**Land Management Objective** - identifies the desired land management outcome(s) of the burn.

**Lead Agency** - The Lead Agency for a planned burn is determined by the burns distance from public land. Within 1.5 km of public land, planned burning on non-public land falls within DELWP's legislative scope and DELWP can choose to be the Lead Agency. If it is outside 1.5 km of public land, DELWP is unable to undertake the planned burn; instead, the CFA will be the Lead Agency to undertake that burn.

**Local Government Area (LGA)** – the municipality in which most of the fuel management activity is located.

**Location** – a direction and distance of the planned burn from the nearest major township/locality.

**Planned Burns** - the controlled application of fire to a defined area of land conducted in accordance with an approved plan to meet specified management objectives.

**Private Property Burn** – burn that occurs wholly on private land.

**Planned Burn Size** – the maximum area of the fuel management activity measured in hectares (ha), including areas specifically excluded from disturbance.

**Residual Risk** - The impacts on life and property that remain after planned burning and bushfires, we call the 'residual risk'. If residual risk is 100 per cent – there has been no fire in the landscape and no fuel reduced and we are at maximum risk where fires will spread and impact. If residual risk is at 70 per cent – the impacts to life and property will be reduced by about a third.

**Strategic Fuelbreak:** A strategic fuelbreak is a strip of land where vegetation has been permanently modified to reduce the amount of fuel available to burn during a bushfire.

**Non-Burning Fuel Treatments** – the modification of fuels using slashing, pruning, chemical application (in alignment with safety standards), grazing, ploughing, mulching or rolling to meet specified management objectives.

## Appendix (1): FFMVic Schedules of Activities

These schedules contain the details of FFMVic-led fuel management activities. Please note that the planned burn year and season identified for each planned burn is indicative only and may be changed due to weather conditions and operational requirements.

Abbreviations maybe used in the following Schedules:

PV - Parks Victoria; COM - Committee of Management; DELWP- Department of Environment Land Water and Planning; PP – Private Property; FRB – Fuel Reduction Burn; ECO - Ecological burn; REG – Regeneration Burn; TO – Traditional Owner; FMZ – Fire Management Zone; APZ - Asset Protection Zone; BMZ – Bushfire Moderation Zone; LMZ - Landscape Management Zone; PBEZ – Planned Burn Exclusion Zone; NZ -Not Zoned; FPA – Fire Protected Area.
