# Foreword

Working together, Forest Fire Management Victoria (FFMVic\*) and the Country Fire Authority (CFA) have developed this Joint Fuel Management Program (JFMP) which covers the Hume FFMVic Region and North East CFA Region. It demonstrates our commitment to working more closely together to deliver the best bushfire risk reduction outcomes for Victorians.

The Joint Fuel Management Program is planned to achieve an integrated and risk-focused fuel management program across public and private land. It is designed to implement long-term bushfire management strategies that outline how the risk of bushfires is managed for the protection of life and property on public and private land, while maintaining and improving natural ecosystems.

In response to the devastating 2019/20 Black Summer bushfires and subsequent inquiries, the Victorian Government has committed to new programs which complement our current fuel management program and aim to reduce bushfire risk across all land tenure.

Strengthening and expanding Victoria's network of Strategic Fuel Breaks is one of the key actions designed to reduce the risk and impacts of more frequent, intense and damaging bushfires under a changing climate.

Investment will also be made on fuel management, targeting long grass and other flammable undergrowth, particularly along our major road and rail corridors. We will work together with Local Government Authorities and water, road and rail authorities to ensure that our works are complementary.

The following program has also been shaped by a variety of research and local information, such as specialist input from FFMVic, CFA staff and volunteers and key industries, as well as knowledge from local communities, including Traditional Owners and key stakeholders. We would like to recognise the work that has been put into developing this Joint Fuel Management Program, by FFMVic, CFA and the local communities.

We encourage your continued input to ensure our plans protect those assets and values which are important to all Victorians.

# Joint Fuel Management Program

This Joint Fuel Management Program (JFMP) lists fuel management activities in the Hume DELWP Region and the North East CFA Region only.

It covers Goulburn, Murrindindi, Ovens and Upper Murray FFMV Districts and CFA Districts 12, 22, 23 and 24 (Map 1).

The schedules contained within this document set out where and when activities are planned to occur for the period from 2021/22 to 2023/24. The planned activities are listed by Lead Agency.

To view all fuel management works in your area, the statewide Joint Fuel Management Program map can be viewed at <http://www.ffm.vic.gov.au/jfmp>.

This document contains details about the following planned activities:

**Planned Burns** - fuel reduction, ecological, cultural and other planned burns by indicative year for the three-year period.

**Non-Burning Fuel Treatments** - the program of works that uses methods other than burning to achieve fuel management objectives.

**Fire season preparation works** – works done prior to the fire season, to ensure infrastructure used in fire detection and suppression are ready for use.

**Cultural burning** – planned burns led by Traditional Owners on their Country using fire for a number of purposes.

It is important to note that the ability to carry out planned activities is dependent on seasonal and local weather conditions. To allow for this, planned burns from the second and third years of the program may be brought forward to the current year to replace a burn planned for the first year.

It is important to note that the ability to carry out planned activities is dependent on seasonal and local weather conditions. To allow for this, planned burns from the second and third years of the program may be brought forward to the current year to replace a burn planned for the first year.

**Map 1: DELWP and CFA Districts included on this Joint Fuel Management Program**

The JFMP is prepared and will be implemented in accordance with Safer Together: A new approach to reducing the risk of bushfire in Victoria, the Code of Practice for Bushfire Management on Public Land 2012 the Regional Bushfire Management Strategy and relevant CFA and FFMVic Instructions, Manuals and Guidelines.

Burns on public land associated with logging regeneration as well as small heap burns are not included in the JFMP as they are approved as part of separate planning processes.

# Our Objectives

This JFMP has been developed to implement strategies set out in the draft Hume Bushfire Management Strategy (BMS), which has been developed by FFMVic and CFA in consultation with agencies, stakeholders and the community.

The BMS will replace the Hume Strategic Bushfire Management Plan and establishes a cross-tenure fuel management strategy to address the bushfire risk across public and private land. It sets clear objectives and associated performance measures for fire management at a regional scale. It identifies where important values and assets are located across the landscape, as well as regional trends including population, industry and environmental change. The BMS defines the configuration of fire management zones across the region that focus appropriate fire management activities to reduce bushfire risk for identified values and promote ecological resilience over the life of the strategy (30-40 years).

Importantly, the BMS identifies Bushfire Risk Engagement Areas (BREA) across public and private land. These areas are intended to support agencies to engage with private landholders about fuel management where it will provide effective bushfire risk reduction.

The cross-agency planning process was overseen by the Hume Regional Strategic Fire Management Planning Committee (RSFMPC), who have given in principle endorsement of the Bushfire Management Strategy. It is complementary to the Hume Regional Strategic Fire Management Plan.

Key principles of the fuel management strategy are to:

- focus fuel management activities within APZ and BMZ where fuel hazards are reduced to an acceptable level to achieve required risk reduction to values and assets, whilst protecting ecological assets where possible, and to select fuel management regimes that meet the target reduction in risk to life and property, reduce risk of large fires to other important values such as water catchments, and minimise the negative impact on ecosystem resilience;

- undertake fuel management activities within LMZ where there is a clear bushfire risk reduction objective or ecological outcome, otherwise minimise fuel management activities within LMZ to reduce negative impacts on ecosystem resilience;

- avoid fuel management within HVEA (High Value Ecological Area) (particularly within LMZ);

- plan fuel management with consideration to the TFI of the region's key vegetation types;

- improve towards the goal distribution of vegetation growth stages, including the maintenance of older growth stages; and reduce the size of bushfires as much as possible through rapid suppression and maintenance of a network of fuel reduced areas (such as strategically placed BMZ and LMZ areas, which are managed together to reduce risk across the landscape, for example interconnecting ridgelines in remote areas) and an annual schedule of maintenance of strategic fire access roads in the Residual Risk

The draft Hume Bushfire Management Strategy contributes to achieving the Victorian Government state wide risk reduction objective, which commits to maintaining bushfire risk at or below a residual risk of 70% in the long-term.

Residual risk is the risk, on average, that bushfires will impact on life and property across the landscape. It is expressed as the percentage of the risk that remains after bushfire history and fuel management (mainly planned burning) activities are considered. It is reported on an annual basis.

Each District works towards managing the local bushfire risk through identifying planned burns and other fuel management works, which collectively will meet the State wide risk reduction target.

This JFMP aims to meet or exceed the regional residual risk targets and to enable the delivery of bushfire management strategies other than residual risk. It is large enough to provide flexibility to account for different seasonal conditions. This may mean that not all planned burns and other works in Year 1 are carried out, which may mean that the projected residual risk is not achieved.

The delivery of fuel management activities on the 2021/22 – 2023/24 JFMP will reduce residual risk across Hume region to a projected 59%. Without any fuel management, the projected residual risk will increase to 79%.

**Table 1: Changes to Residual Risk through implementation of the JFMP**

Projected Residual Risk % by 2024 with implementation of JFMP	57%	70%	52%	37%	59%
Projected Residual Risk % by 2024 without implementation of JFMP	81%	86%	75%	51%	79%

# 2021/22 – 2023/24 Joint Fuel Management Program

Planned burning and other fuel management works on this JFMP have been designed to:

- Reduce or maintain residual risk,
- Reduce the size and intensity of bushfire in the landscape to reduce the risk to ecosystems, communities and industries,
- Introduce fire into recently burnt landscapes to prevent continuous fuel build up,
- Use landscape burning techniques along with other strategies to achieve the above, and
- Enhance the use of non-burning fuel treatments to reduce bushfire risk.

Planned burns may be managed differently across different areas to achieve bushfire risk reduction. In areas close to towns or other assets, **asset protection burns** are more frequent and higher coverage to protect people and the things they value. These burns make a significant contribution to our residual risk reduction.

**Landscape burning** can be used to reduce the spread of bushfires, aiming to reduce the size and intensity of major bushfires in the landscape. Generally, these landscape burns are of larger scale and low coverage. They may be carried out over multiple years and can be unbounded, relying on fuel and moisture differentials for containment.

While **Strategic fuel breaks** are approved via a different process, they are included in the JFMP to demonstrate our integrated approach to managing bushfire risk.

## Planned burns

The following is a summary of the area and number of planned burns in all Districts over the next three years to achieve BMS objectives. As previously mentioned, these planned burns may have fuel reduction or ecological objectives. Details for individual burns are included in Appendices 1 and 2. Any planned burns which have been added to the JFMP for the first time are indicated as being 'New' in the detailed description.

For the 2021-22 year the following communities will be a focus for delivery of the JFMP:

Granya, Dartmouth, Bucheen Creek/Cravensville, Bright, Mt Beauty, Yackandandah, Jamieson North, Sawmill Settlement, Kevington, Marysville, Kinglake, Kinglake West and Narbethong

### Non-burning fuel treatments

Non-burning fuel treatment can include mulching, slashing or other operations which do not involve planned burning to reduce fuel loads. The work is an important contributor to reducing bushfire risk to communities as non-burning treatments may be more appropriate or practical in certain areas. For example, fuel on small areas located within or close to townships may be slashed or mulched, where burning is impractical. These methods may also be more suitable in certain vegetation types.

Some of these fuel treatments are annual, with others prioritised based on the seasonal conditions and scheduling of specific planned burns. The actual treatment area will be dependent on the condition of the fuels at the time of assessment.

## Strategic Fuel Breaks

Strengthening and expanding Victoria's network of Strategic Fuel Breaks is one of the key actions that form DELWP's Advanced Forest and Fire Management strategy, designed to reduce the risk and impacts of more frequent, intense and damaging bushfires under a changing climate.

Fuel breaks are critical to protecting communities, catchments and the environment from devastation by bushfire. They do this by making it easier, faster and safer for firefighters to suppress fires. As a last resort, they can also assist in reducing the intensity of direct fire on houses and other buildings.

The Strategic Fuel Break program is utilising two types of protection breaks in their work:

**Landscape protection breaks (LPB):** Located in the forest to divide the landscape into units/areas suitable to help to reduce the fire to the smallest size possible. These breaks provide a platform for fighting fires in the forest and may also reduce fire impacts on nearby communities.

**Asset protection breaks (APB):** Designed to provide direct protections of communities and assets from the direct impacts of fire. These breaks are generally located adjacent to townships and assets.

The following strategic fuel breaks are proposed for construction or upgrade during 2021/22 (Table 4). These are high priority Strategic Fuel Breaks that are planned to be constructed this year. They are approved by a separate process and are displayed on the JFMP for information only.

Currently, the Strategic Fuel Break program is only funded for 2021/22. However, initial planning has commenced to identify the overall Strategic Fuel Break network should further funding be available in future years. Additional high priority strategic fuel breaks have been identified as potential candidate breaks for construction in future years if funding allows, or as contingency fuel breaks should a proposed 2021/22 strategic fuel break not be able to be constructed. They are approved by a separate process and are displayed on the JFMP for information only.

# Cultural Burning

Cultural fire is fire deliberately put into the landscape authorised and lead by the Traditional Owners of that Country for a variety of purposes, including ceremony, protection of cultural and natural assets, fuel reduction, regeneration and management of food, fibre and medicines, flora regeneration, fauna habitat protection and healing Country's spirit.

We are guided by the Victorian Traditional Owner Cultural Fire Strategy which provides policy direction and a framework for fire and land management agencies to better enable Traditional Owners to undertake cultural burning for these cultural objectives.

There are six principles underpinning this strategy:

- cultural burning is right fire, right time, right way and for the right (cultural reasons), according to lore;
- burning is a cultural responsibility;
- cultural fire is living knowledge;
- monitoring, evaluation and research support cultural fire objectives and enable adaptive learning;
- Country is managed holistically; and
- cultural fire is healing.

The Strategy was authored by Victorian Traditional Owners with the support of a partnership between the Federation of Victorian Traditional Owner Corporations, DELWP, Parks Victoria and the CFA.

FFMVic and CFA recognises that cultural burning can assist landholders and communities in the use of fire to care for Country. The sharing of knowledge by our local Traditional Owners as well as from indigenous peoples from other parts of Australia will assist in improving our adaptive fire management practices in Victoria. This builds on supporting community through learning about how we live with fire.

Working together to foster knowledge sharing is an important way to enable participation of Aboriginal communities.

The following cultural burns are nominated and will be led by Traditional Owners with support from Forest Fire Management Victoria and CFA (Table 5).

Deputy Chief Fire Officer, Hume Region:	Aaron Kennedy
Deputy Chief Officer, North East CFA Region:	Ross Sullivan

## Approval

The 2021/22 – 2023/2024 Joint Fuel Management Program has been approved by:

DELWP Chief Fire Officer:	Chris Hardman
CFA Chief Officer:	Jason Heffernan

Noting for on-ground ignition and delivery of cross tenure and private property burns, FFMVic and CFA agency responsibilities remain unchanged.

## How to become involved in the development of the Joint Fuel Management Program

FFMVic and CFA welcome comment on fire management all year round, on all parts of the planning process – both strategic and operational. Please be aware that due to the planning cycle your comments relating to certain aspects of the program may not be included until the following year's Joint Fuel Management Program.

Comments and suggestions relating to the JFMP can be sent to:

### *Planned Burns Victoria*

Planned Burns Victoria (PBV) is a new, easy-to-use, opt-in system that you can customise to suit your notification needs. PBV currently provides an overview of all planned burns on this JFMP. The system also notifies people when a planned burn in Victoria is close to being ignited.

You can type in a postcode or location and access to information about planned burns on public and/or private land that are close to being ignited. You can access the system at:

<https://plannedburns.ffm.vic.gov.au>

## Appendix (1): FFMVic Schedules of Activities

These schedules contain the details of FFMVic-led planned burning activities. Please note that the planned burn year and season identified for each planned burn is indicative only and may be changed due to weather conditions and operational requirements.

The following abbreviations maybe used in the following Schedules: '\*' asterisk on burn name denotes a cross tenure burn; PV - Parks Victoria; COM - Committee of Management; DELWP- Department of Environment Land Water and Planning; PP – Private Property; FRB – Fuel Reduction Burn; ECO - Ecological burn; REG – Regeneration Burn; TO – Traditional Owner; FMZ – Fire Management Zone; APZ - Asset Protection Zone; BMZ – Bushfire Moderation Zone; LMZ - Landscape Management Zone; PBEZ – Planned Burn Exclusion Zone; NZ -Not Zoned; FPA – Fire Protected Area.

## Appendix (2): CFA Schedules of Activities

These schedules contain the details of CFA-led planned burning activities. Please note that the planned burn year and season identified for each planned burn is indicative only and may be changed due to weather conditions and operational requirements.

The following abbreviations may be used: '\*' asterisk on burn name denotes a cross-tenure burn; COM - Committee of Management; PP – Private Property; FRB – Fuel Reduction Burn; ECO - Ecological burn; TO – Traditional Owner.

### SCHEDULE 1: CFA LEAD DISTRICT 12 – PLANNED BURNING

#### CFA Lead District 12 Planned Burns 2021/22

Fuel Treatment Name	Fuel Treatment Number	Control Agency	Region	District	Indicative Year	Local Government Area	Location Description	Fuel Treatment Type	Land Management Objective	Fire Management Zone	Status	Treatment Area
Acheron - 547 - 411 Acheron Rd	D12-20-015	CFA	NORTH EAST	12	Year 1 - 2021/2022	MURRINDINDI SHIRE	3.5km E of Acheron	ECOLOGICAL	To modify the vegetation Composition across the planned area to assist the Promotion of Kangaroo Grass.	APZ	Proposed	6.4
Acheron - Acheron Rd 1	D12-20-013	CFA	NORTH EAST	12	Year 1 - 2021/2022	MURRINDINDI SHIRE	3.5km E of Acheron	FUEL REDUCTION	To provide the highest level of localised protection to human life, property and community assets identified as highly valued including Acheron Township.	APZ	Proposed	8.25
Acheron - Acheron Rd 2	D12-20-012	CFA	NORTH EAST	12	Year 1 - 2021/2022	MURRINDINDI SHIRE	4km E of Acheron	FUEL REDUCTION	To develop fuel reduced areas of sufficient width and continuity to reduce the speed and intensity of bushfires.	BMZ	Proposed	4.24
Acheron - McColl Lane	D12-20-014	CFA	NORTH EAST	12	Year 1 - 2021/2022	MURRINDINDI SHIRE	.5km N of Acheron	FUEL REDUCTION	To provide the highest level of localised protection to human life, property and community assets identified as highly valued including Acheron Community Hall and Fire Station Complex.	APZ	Proposed	0.52
Beveridge - Beveridge Reserve 2	D12-19-011	CFA	NORTH EAST	12	Year 1 - 2021/2022	MITCHELL SHIRE	0.5km SE of Beveridge	FUEL REDUCTION	To develop fuel reduced areas of sufficient width and continuity to reduce the speed and intensity of bushfires.	BMZ	Proposed	0.6
Beveridge - Beveridge Reserve	D12-19-010	CFA	NORTH EAST	12	Year 1 - 2021/2022	MITCHELL SHIRE	0.5km SE of Beveridge	FUEL REDUCTION	To develop fuel reduced areas of sufficient width and continuity to reduce the speed and intensity of bushfires.	BMZ	Proposed	0.7
Broadford Kilmore Rd 200m North of Dry Creek Rd	D12-19-020	CFA	NORTH EAST	12	Year 1 - 2021/2022	MITCHELL SHIRE	None	FUEL REDUCTION	To develop fuel reduced areas of sufficient width and continuity to reduce the speed and intensity of bushfires.	BMZ	Proposed	1.2
Broadford Rupert St Reserve	D12-19-008	CFA	NORTH EAST	12	Year 1 - 2021/2022	MITCHELL SHIRE	None	FUEL REDUCTION	To develop fuel reduced areas of sufficient width and continuity to reduce the speed and intensity of bushfires.	BMZ	Proposed	1.18
Kilmore - Broadford-Kilmore Rd 1	D12-20-008	CFA	NORTH EAST	12	Year 1 - 2021/2022	MITCHELL SHIRE	0.01km N of Kilmore	FUEL REDUCTION	To develop fuel reduced areas of sufficient width and continuity to reduce the speed and intensity of bushfires.	BMZ	Planned	1.39
Kilmore - Broadford-Kilmore Rd 2	D12-20-006	CFA	NORTH EAST	12	Year 1 - 2021/2022	MITCHELL SHIRE	2.5km N of Kilmore	FUEL REDUCTION	To develop fuel reduced areas of sufficient width and continuity to reduce the speed and intensity of bushfires.	BMZ	Planned	1.58

Kilmore - Kilmore-Lancefield Rd	D12-20-010	CFA	NORTH EAST	12	Year 1 - 2021/2022	MITCHELL SHIRE	.01km W of Kilmore	FUEL REDUCTION	To develop fuel reduced areas of sufficient width and continuity to reduce the speed and intensity of bushfires.	BMZ	Proposed	14.24
Kilmore - Meade Court Creek Reserve	D12-20-009	CFA	NORTH EAST	12	Year 1 - 2021/2022	MITCHELL SHIRE	0.01km N of Kilmore	FUEL REDUCTION	To develop fuel reduced areas of sufficient width and continuity to reduce the speed and intensity of bushfires.	BMZ	Planned	1.7
Fawcett - Parsons Road	D12-21-008	CFA	NORTH EAST	12	Year 1 - 2021/2022	MURRINDINDI SHIRE	0.5km NW of Koriella	FUEL REDUCTION	To develop fuel reduced areas of sufficient width and continuity to reduce the speed and intensity of bushfires.	BMZ	Planned	1.3
Koriella - Spring Creek Road	D12-21-009	CFA	NORTH EAST	12	Year 1 - 2021/2022	MURRINDINDI SHIRE	0.3km SW of Fawcett	FUEL REDUCTION	To develop fuel reduced areas of sufficient width and continuity to reduce the speed and intensity of bushfires.	BMZ	Planned	0.71

Fuel Treatment Name	Fuel Treatment Number	Control Agency	Region	District	Indicative Year	Fuel Treatment Type	Land Management Objective	Treatment Area	Disturbance Type (NBFT)
Chiltern Valley - CHIU-2 - Harkins Rd	D24-22-003	CFA	NORTH EAST	24	Year 3 - 2023/2024	SLASHING / MOWING	To provide bushfire protection by reducing overall fuel hazard and bushfire hazard in the landscape.	14.8	MAINTENANCE
Porepunkah - PORE-2 Back Porepunkah Rd	D24-19-183	CFA	NORTH EAST	24	Year 3 - 2023/2024	SLASHING / MOWING	To build on protection works in adjacent Asset Protection Zone.	7.83	NEW
Beechworth - BECH-14 Beechworth-Wangaratta Rd	D24-21-034	CFA	NORTH EAST	24	Year 3 - 2023/2024	MULCHING	To provide bushfire protection by reducing overall fuel hazard and bushfire hazard in the landscape.	45.67	MAINTENANCE
Beechworth - BECH-15 Beechworth Wodonga Rd	D24-21-035	CFA	NORTH EAST	24	Year 3 - 2023/2024	MULCHING	To provide bushfire protection by reducing overall fuel hazard and bushfire hazard in the landscape.	50.99	MAINTENANCE
Beechworth - BECH-16 Beechworth-Chiltern Rd	D24-21-036	CFA	NORTH EAST	24	Year 3 - 2023/2024	MULCHING	To provide bushfire protection by reducing overall fuel hazard and bushfire hazard in the landscape.	39.64	MAINTENANCE
Beechworth - BECH-17 Buckland Gap Rd	D24-21-038	CFA	NORTH EAST	24	Year 3 - 2023/2024	MULCHING	To provide bushfire protection by reducing overall fuel hazard and bushfire hazard in the landscape.	4.35	MAINTENANCE
Beechworth - BECH-18 Diffey Rd	D24-21-037	CFA	NORTH EAST	24	Year 3 - 2023/2024	MULCHING	To provide bushfire protection by reducing overall fuel hazard and bushfire hazard in the landscape.	14.08	MAINTENANCE
Bethanga - BETH-11 Talgarno Gap Ln	D24-19-037	CFA	NORTH EAST	24	Year 3 - 2023/2024	SLASHING / MOWING	To build on protection works in adjacent Asset Protection Zone.	1	MAINTENANCE
Bethanga - BETH-9 Bethanga Recreation Reserve	D24-19-045	CFA	NORTH EAST	24	Year 3 - 2023/2024	SLASHING / MOWING	To provide the highest level of localised protection to human life, property and community assets identified as highly valued including Fire Station.	2.03	MAINTENANCE
Chiltern - CHIU-5 North Rd	D24-23-003	CFA	NORTH EAST	24	Year 3 - 2023/2024	SPRAYING	To provide bushfire protection by reducing overall fuel hazard and bushfire hazard in the landscape.	1.63	MAINTENANCE

# Glossary

This glossary provides information on terms contained within the body of this document and the schedules.

**BREA** - Bushfire Risk Engagement Areas.

**Burn Type** – indicates the primary purpose of the burn.

**Burn Number and Name**– the unique identifier for each burn or planned fuel management activity.

**Cross-tenure burn** – a burn that covers both public and private land

**Fire Management Zone (FMZ)** – an area of public land in which fire is managed for specific asset, fuel and ECO objectives. Values included in this column can be APZ - Asset Protection Zone; BMZ – Bushfire Moderation Zone; LMZ - Landscape Management Zone, PBEZ – Planned Burn Exclusion Zone; or, NZ -Not Zoned.

**Forest Fire Management Victoria (FFMVic)** – FFMVic consists of specialist staff from DELWP, Parks Victoria, Melbourne Water and VicForests.

**Land Management Objective** - identifies the desired land management outcome(s) of the burn.

**Lead Agency** - The Lead Agency for a planned burn is determined by the burns distance from public land. Within 1.5 km of public land, planned burning on non-public land falls within DELWP's legislative scope and DELWP can choose to be the Lead Agency. If it is outside 1.5 km of public land, DELWP is unable to undertake the planned burn; instead, the CFA will be the Lead Agency to undertake that burn.

**Local Government Area (LGA)** – the municipality in which most of the fuel management activity is located.

**Location** – a direction and distance of the planned burn from the nearest major township/locality.

**Planned Burns** - Planned burning is one of FFMVic and CFA's most important fire prevention activities. It involves the controlled application of fire during periods of lower fire risk, to achieve one of three main purposes: fuel reduction (FRB), ecological (ECO) management and forest regeneration (REG).

It is important to understand that planned burning operations do not stop or eliminate the risk of bushfires. However, Victorian research, and similar information from other parts of Australia and overseas, clearly shows that firefighters have a much better chance of managing bushfires in areas where planned burns have been carried out.

Approved burns in this year's Plan will require a range of preparation works to make the planned area ready to ignite when the weather and other conditions are right. Preparation works may include, brushing up or grading of existing boundaries and internal tracks, management of hazardous trees, the construction and preparation of boundary and control lines with machinery and pest plant controls. The preparation works will have on-site inspections which will assess the surrounding assets and planned burn objectives.

**Private Property Burn** – burn that occurs wholly on private land.

**Planned Burn Size** – the maximum area of the fuel management activity measured in hectares (ha), including areas specifically excluded from disturbance.

**Residual Risk** - The impacts on life and property that remain after planned burning and bushfires, we call the 'residual risk'. If residual risk is 100 per cent – there has been no fire in the landscape and no fuel reduced and we are at maximum risk where fires will spread and impact. If residual risk is at 70 per cent – the impacts to life and property will be reduced by about a third.

**Strategic Fuelbreak:** A strategic fuelbreak is a strip of land where vegetation has been modified to reduce the amount of fuel available to burn during a bushfire.

**New Burn**– 'NEW' = New burn did not appear on last year's JFMP. *Blank box* = Not a new burn. Burn was approved in the previous JFMP but has not been carried out, it is included in this JFMP and may be conducted at any time.

**Non-Burning Fuel Treatments** – Non-burning fuel treatments such as the maintenance and construction of fire control lines, fire access tracks, fuel breaks, fire infrastructure and other fuel management activities are required to support the planned burning program. Treatments to achieve these works can include slashing, pruning, chemical application (in alignment with safety standards), grazing or other operations (such as ploughing, mulching or rolling) that may be more appropriate or practical in certain areas. For example, fuel on small areas or blocks located within townships may be treated mechanically, where burning is impractical. These methods may also be more suitable in certain vegetation types.
